TECHNICAL SKILLS

Languages: CSS, C#, HTML, JavaScript, SQL, Typescript
Frameworks & Libraries: ASP.NET Core, Cypress, Jest, Next.js, NPM, React, TailwindCSS
Tools & Platforms: AWS (Lambda and Cognito), Claude, Docker, Git, Figma, Postman, Redis, Supabase

EXPERIENCE

Strastan Solutions Corp | Makati Feb 2026 - Jun 2026
AWS Fullstack Developer Intern

- Designed and implemented a backend microservice using TypeScript and AWS Lambda to integrate Amazon Chime SDK and Stripe workflows with the application, enabling communication between external services and internal system components.
- Developed and tested application functions using AI-assisted development tools, achieving over 98% code coverage and reducing feature deployment cycles by five days.
- Contributed to the development and integration of a multi-tenant conferencing feature designed to support more than 10 businesses.
- Supported modular backend development and API integration to improve system functionality and maintainability.

PROJECTS

FireSpot: A Global Thermal Hotspot Tracker Aug. 2026

- Designed and developed a responsive full-stack web application using Next.js, React, TypeScript, and ASP.NET Core, translating Figma designs and functional requirements into interactive user interfaces and backend features.
- Integrated real-time wildfire hotspot data from three NASA FIRMS VIIRS satellites through API pipelines, delivering geospatial data for interactive mapping and visualization.
- Optimized API response time by 84%, reducing latency from 25.3 seconds to 3.95 seconds through Redis-based tile caching and increasing the cache hit rate from 2.7% to 69.5%.
- Implemented interactive map layers for fire detection and Air Quality Index (AQI) visualization using deck.gl, react-map-gl, and maplibre-gl. Containerized backend services using Docker and configured cached REST API endpoints to improve data delivery between the backend and frontend.

Money Tracker Feb. - Sep 2026

- Developed a full-stack financial management application using Next.js, React, TypeScript, Tailwind CSS, and Supabase (PostgreSQL), delivering seven features across 13 pages, three authentication methods, and light and dark themes.
- Designed and optimized relational database structures for account and transaction management, implementing four PostgreSQL RPC functions, full-text search, and server-side pagination.
- Implemented JSON and CSV import/export functionality across five database tables to support reliable data backup and restoration.
- Developed and maintained 10 Jest test suites containing 43 unit tests, achieving 71.9% code coverage, and created Cypress end-to-end tests for account management, transaction operations, data restoration, and TOTP multi-factor authentication.
- Implemented multi-factor authentication using Supabase assurance levels and structured typed server actions with discriminated unions to strengthen error handling and application reliability.

EDUCATION

Adamson University | Manila July 2026
B.S. in Computer Science, Major in Web Development

- Relevant Courses: Object-oriented Programming, Artificial Intelligence, Software Engineering 1 & 2, Data Structures and Algorithms, Discrete Structures 1 & 2, Software Quality Assurance.

AWARDS

- 2nd Place, Healthcare Track, SiKAPTala 2026 National CS & IT Competition Jun 2026
- Hatchling Dynamo and Undercover Hatchlings, The Hatch 2025: Gateway to Global Innovation Mar 2025

CERTIFICATIONS

- Information Technology Specialist in Cybersecurity | Certiport May 2026
- Information Technology Specialist in Networking | Certiport May 2025
